#### Claim Objections

1. Claims 45-46, 49 are objected to because of the following informalities: all abbreviations should be labeled with descriptive legends (e.g., FFT (fast fourier transformer)). Appropriate correction is required.

### Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
  The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 49 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 49 recites the limitation "said forward error corrected data" in lines 7-8.

There is insufficient antecedent basis for this limitation in the claim.

Application/Control Number: 10/051,593 Page 3

Art Unit: 2665

#### Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35
U.S.C. 102 that form the basis for the rejections under this section made in this
Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors

Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology

Technical Amendments Act of 2002 do not apply when the reference is a U.S.

patent resulting directly or indirectly from an international application filed

before November 29, 2000. Therefore, the prior art date of the reference is

determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre–

AIPA 35 U.S.C. 102(e)).

Art Unit: 2665

5. Claims 45 and 49 are rejected under 35 U.S.C. 102(e) as being anticipated by Hulyalkar (5,291,289).

#### Regarding claim 45:

Hulyalkar discloses in a bi-directional data transmission system that facilitates communications between a plurality of remote units and a central unit using a symbol based discrete multi-carrier transmission scheme that has a multiplicity of discrete sub-channels provided for facilitating upstream communications between the plurality of remote units and the central unit, an apparatus transmitting data from a selected remote unit to the central unit, comprising:

a serial to parallel converter (10, fig.4) for receiving said data and converting said data to parallel data;

an encoder (20, fig.4) coupled to said serial to parallel converter 10 for encoding said parallel data according to one of a first and a second modulation schemes responsive to a control signal, said first modulation scheme being operative during a polled transmission mode and requires a receiver (130, fig.4) at said central unit to have prior knowledge of the identity of said selected

Art Unit: 2665

remote unit for decoding, said second modulation scheme being operative during a fast access transmission mode and does not require the receiver at said central unit to have prior knowledge of the identity of said selected remote unit for decoding;

an IFFT modulator (30,fig.4) coupled to said encoder 20 for modulating encoded data from said encoder; and

a parallel to serial converter (inherent whereat between 30 and 40, fig.4) coupled to said IFFT modulator for converting modulated data from said IFFT modulator to a serial format for transmission to said central unit.

#### Regarding claim 49:

Hulyalkar discloses in a bi-directional data transmission system that facilitates communications between a plurality of remote units and a central unit using a symbol based discrete multi-carrier transmission scheme that has a multiplicity of discrete sub-channels provided for facilitating upstream communications between the plurality of remote units and the central unit, an

Art Unit: 2665

apparatus receiving data sent from a selected remote unit to the central unit, comprising:

a serial to parallel converter (80, fig.4) for receiving said data and converting said forwarded error corrected data to parallel data;

a FFT demodulator (90, fig.4) coupled to said serial to parallel converter 80 for demodulating parallel data from said serial to parallel converter;

an decoder (100, fig.4) coupled to said FFT demodulator 90 for decoding demodulated data from said FFT demodulator 90 according to one of a first and a second demodulation schemes responsive to a control signal, said first demodulation scheme being operative during a polled transmission mode and requires prior knowledge of the identity of said selected remote unit for decoding, said second demodulation scheme being operative during a fast access transmission mode and does not require prior knowledge of the identity of said selected remote unit for decoding; and

a parallel to serial converter (110, fig.4) coupled to said decoder 100 for converting decoded data from said decoder 100 to a serial format.

Page 7

Application/Control Number: 10/051,593

Art Unit: 2665

Regarding claim 46:

Hulyalkar further discloses wherein said first modulation scheme is QAM and said second modulation scheme is DQPSK {col.3, lines 37-42}.

## Allowable Subject Matter

- 6. Claims 47-48 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuongchau Ba Nguyen whose telephone number is 703–305–0093. The examiner can normally be reached on Monday-Friday 10:00AM-3:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy Vu can be reached on 703-308-6602. The fax
